

APRO / Promedico

APRO is part of the Promedico group, a significant player in the Dutch information systems market for first line health care. In this dynamic and complex world, we develop and manage the best and most innovative applications to support (end)users in primary care, including general medical practices and community pharmacies. On a daily basis, more than 125 employees from our Utrecht and Lisbon office work closely together to serve our customers optimally.

OutSystems Developer (junior/ medior)

As Software Developer OutSystems, one of the leading low code development platforms, you work on a pioneering ICT solution for the Dutch pharmacy market. This extensive and complex application will bring the right digital experience for pharmacists throughout the country, not just now but indeed also in the future. When it comes to bringing solutions to the first line health care, we prefer to set the standard instead of following it, thus retaining our position at the forefront of innovation.

+ What are you going to do

As part of an international scrum team, working from Utrecht as well as from Lisbon, you are jointly responsible for the further development of APRO. Your most important task is to develop software with the OutSystems platform. In addition, you also think along with us in making user stories, work on the technical design of the application and support the testers where necessary. Some real OutSystems gurus are part of our team, so next to developing the APRO system, there's plenty of opportunity to develop yourself! The team works with a constant agile philosophy in mind.

+ Who are you?

We are looking for an enthusiastic developer who feels involved in the healthcare sector. In this role, you are able to creatively convert user stories into concrete solutions, working closely together with the various disciplines within and outside your squad. Development of software is done accurately, with a lot of attention to the result. You are proactive, socially and driven, but also creative, entrepreneurial and solution-oriented. While working in a team you take responsibility for your own work and you know knowledge sharing with your colleagues is necessary. Of course you are enthusiastic and passionate about the latest developments in your field.

+ What do you bring to the table?

- You have an IT related bachelor's degree at HBO or Academic level.
- You have 2 to 5 years of development experience, preferably with web applications.
- You have experience or affinity with modern platforms such as Outsystems.
- You have some know-how of Java and/or .NET, Javascript, HTML5, CSS or XML.
- You have good knowledge of application architecture and data modelling.

- You are analytically strong, result-oriented, a strong team player, social and flexible.
- You have a pro-active attitude and you actively contribute to new technological developments.
- You are always eager to learn and further develop your skills.

✚ What can you expect from us

We offer you a very challenging position in an environment where your talents really matter, focused on quality and innovation. Within the Promedico group there are good primary and secondary employment conditions including an excellent pension provision and a good salary that suits your experience and growth potential. In addition, there are flexible working hours and the possibility of working from home from time to time. We believe in making efficient use of your time. Of course, there are opportunities for training courses. You will also be closely supervised by highly experienced OutSystems experts, so you can quickly develop yourself further. Your workplace is easily accessible by both private and public transport.

✚ Interested in becoming an OutSystems guru?

For more information about this opportunity, contact Marc Pols, teamlead APRO, via mpols@promedico.nl. Or call +31 6 35 11 21 51.
